

CONSTRUCTION MANAGEMENT

Lauren offers a full range of construction management, inspection and support services. By integrating our experienced teams at the onset of any project, Lauren ensures safe and efficient construction oversight on behalf of our clients.

Our construction management team teams integrate across all industries, trades, technicians, and disciplines, including:

- Pipeline and HDD construction
- Facility piping and mechanical equipment
- Civil works
- Structural installations
- Electrical installations
- Programming and commissioning
- Continuous maintenance management
- Facilities turnaround management

Control from the on-site of the project, our expertise in all construction logistics provides the capability to manage, direct, schedule, and hold accountable all trades, contractors and services on site.

Lauren's robust toolset efficiently manages the project's cost and schedule, providing comfort to the client that it will be on time and within budget. These tools include:

- Contract strategy plans
- Construction management plans
- Construction execution plans
- RFI templates, logs and procedures
- Change management plans and logs
- Lem tracking and management tools
- Daily, weekly and monthly reporting templates
- Kick off meeting checklists and documentation
