

EPCM & PROJECT MANAGEMENT

Our approach to project delivery is tried, proven, and trusted. We've earned our reputation by successfully executing projects that are safe, high quality, cost effective and completed on time.

We bring trusted experience across comprehensive engineering, procurement, and construction management (EPCM) as well as project management (PM) services. Our processes are based on the Project Management Institute (PMI) methodology adapted for our fit-for-purpose approach.

We have a "one-team/one-goal" approach. By integrating with client teams, we establish clear communication to enable quick response as conditions shift and the flexibility to modify our execution strategy quickly.

Together we:

- Clearly define project scope to ensure alignment on what success looks like
- Build a custom project team with the best technologies
- Clearly define roles and responsibilities based on RACI (responsible, accountable, consulted, informed)
- Streamline project communication and productivity
